User Acceptance Testing (UAT) Test Plan Template

Document	CRM System — Full Testing & Acceptance Pack
Version	1.0
Date	19 September 2026
Status	Template — ready for customisation
Audience	Project Manager, QA Lead, Business Owner, UAT Testers

Part 1 — What a CRM Is: Core Specifications

A CRM (Customer Relationship Management) system is software that manages every interaction between an organisation and its customers and leads.

1.1 Functional Specifications

Area	What it must do
Contact management	Customer profiles, interaction history, segmentation, duplicate detection
Lead & pipeline management	Track deals through stages: lead → opportunity → won/lost; forecasting
Sales automation	Follow-up tasks, reminders, quotes and invoices, approval workflows
Marketing tools	Email campaigns, engagement tracking, consent management
Customer service	Ticketing, support history, SLA tracking and escalation
Reporting & analytics	Dashboards, sales forecasts, KPIs, exportable reports
Integration	Email, calendar, ERP, telephony, social media, payment gateways via API

1.2 Non-Functional Specifications (what defines quality)

Area	Target / requirement
Performance	Page loads under 2–3 seconds at normal load
Security	Encryption at rest and in transit, role-based access control, MFA, audit logs
Availability	Uptime target of 99.9% (≈ 8.7 hours downtime per year max)
Scalability	Grows with users and data without performance degradation
Usability	Intuitive UI, minimal training required, accessibility compliant
Compliance	GDPR / POPIA / local data-protection law, data residency rules
Data integrity	Accurate, consistent records — no duplicates, corruption or loss

Part 2 — Tests Conducted While Building the CRM

#	Test type	Purpose
1	Unit testing	Each small piece of code works correctly on its own
2	Integration testing	Modules communicate correctly (e.g., email sync ↔ contacts)
3	System testing	The whole CRM works end-to-end as one system
4	Functional testing	Every feature does exactly what the specification says
5	UI/UX testing	Screens are usable, consistent and accessible
6	Performance / load testing	Simulates hundreds of users and large data volumes
7	Security testing	Penetration tests, SQL-injection attempts, vulnerability scans
8	API testing	External integrations (ERP, email, payments) work reliably
9	Regression testing	New changes did not break previously working features
10	Data migration testing	Legacy customer data imports cleanly with reconciled counts
11	User Acceptance Testing (UAT)	Real staff confirm the system fits actual business processes

Part 3 — The Final Proof: Acceptance & Go-Live Criteria

Before the CRM is declared ready, every item below must be evidenced:

#	Evidence	What proves it
1	UAT sign-off	End users formally confirm the system meets requirements — the single most important gate
2	Compliance audit	Data-protection assessment passed (GDPR / POPIA); privacy policy and consent management verified
3	Security certification	Penetration-test report shows no critical or unresolved high vulnerabilities
4	Performance benchmark	Agreed response times met under simulated production load
5	Data migration validation	Record counts reconciled, zero data loss, spot-checks accurate
6	Backup & DR test	A live restore was actually performed; disaster-recovery plan in place
7	Documentation	User manuals, admin guides and technical documentation delivered
8	Legal & contracts	Data-processing agreements signed, vendor warranties and SLAs in place
9	Pilot rollout results	Small team used it live for 2–4 weeks with measurable success and no critical bugs
10	Go-live checklist & hypercare	Monitoring dashboards active, rollback plan ready, support process live

In one sentence: the CRM is proven when users formally accept it (UAT), an independent security and compliance audit passes, performance benchmarks are met, and a live pilot runs without critical issues — capped by a signed acceptance certificate from the business owner.

Part 4 — UAT Test Plan (Template)

4.1 UAT Overview & Objectives

Project / CRM name	_____
Business owner	_____
UAT lead / coordinator	_____
Testers (end users)	_____
UAT environment	Production-copy environment with realistic (anonymised) data
Test period	____ / ____ / 2026 to ____ / ____ / 2026
Objective	Confirm the CRM supports real business processes and is fit to go live

4.2 Entry Criteria (before UAT starts)

- All critical and high build-phase defects are resolved
- System testing and regression testing are complete and passed
- Test environment ready with realistic, anonymised data
- Test cases written, reviewed and approved by business owner
- Testers trained and UAT schedule agreed

4.3 Exit Criteria (for sign-off)

- 100% of test cases executed
- No open critical or high-severity defects
- Low/medium defects have agreed workarounds or fix dates
- Business owner signs the UAT Acceptance Certificate
- Go/No-Go decision documented and communicated

4.4 Defect Severity Definitions

Severity	Definition	Action
Critical	System unusable, data loss or corruption, security breach	Blocks go-live; must fix
High	Major function broken with no workaround	Must fix before go-live
Medium	Function works but with issues; workaround exists	Fix before or shortly after go-live
Low	Cosmetic or minor usability issue	Log for future release

4.5 UAT Test Case Log

Execute each case and record the result. Any failed case must raise a defect with a severity rating.

TC ID	Scenario	Steps / expected result	Result (P/F)	Defect #	Tester / date
TC-01	Create a new customer contact	Fields save correctly; record appears in list; no duplicates created			
TC-02	Convert a lead to an opportunity	Lead moves through pipeline stages; history retained			
TC-03	Log a support ticket & escalate	Ticket created, SLA timer starts, escalation notifies correct user			
TC-04	Generate and send a quote	Quote pulls correct pricing; email sends; status updates			
TC-05	Run a sales dashboard report	Figures match test data; export to Excel/PDF works			
TC-06	User roles & permissions	Sales rep cannot access admin settings; manager sees team data only			
TC-07	Search & filter records	Search returns correct results; filters work across fields			
TC-08	Data import from legacy system	File imports; counts reconcile; error log for bad rows			
TC-09	Email/calendar integration	Emails log to correct contact; meetings sync both ways			
TC-10	Password reset & MFA	Reset flow works; MFA challenge enforced per policy			
TC-11	Mobile / tablet access	Core screens usable and data syncs on mobile			
TC-12	Backup & restore check	Admin can confirm last backup ran; test restore verified			
TC-__	(add your own scenarios)				

4.6 Defect Log

Defect #	TC ID	Description	Severity	Status	Fixed by / date
D-001					
D-002					
D-003					
D-004					
D-005					
D-006					
D-007					
D-008					
D-009					
D-010					

4.7 UAT Acceptance Certificate (Sign-off)

By signing below, the Business Owner confirms that User Acceptance Testing is complete, exit criteria are met, and the CRM system is accepted for go-live.

Role	Name	Signature	Date
Business Owner			
UAT Lead			
Project Manager			
IT / Security Representative			

Conditions / reservations (if any):
